Seasoned full-stack software engineer and Computer Science graduate from Capitol Technology University with experience in software development, machine learning, data analysis, and cybersecurity through roles at Jet Propulsion Laboratory and United States Patent and Trademark Office. Skilled in Python, Java, SQL, React, machine learning tools, and data visualization, with hands-on experience developing secure applications, analyzing large datasets, and delivering technical solutions in collaborative environments.

Education

Bachelor of Science in Computer Science | Capitol Technology University | Laurel, MD

Graduated

GPA: 3.75

Experience

United States Patent & Trademark Office (USPTO), Alexandria, VA

Dec 2025 – Apr 2026

Patent Examiner - Artificial Intelligence Unit

- Conducted technical research and data analysis on existing publications and prior art to support evidence-based evaluations and informed decision-making throughout the patent review process.
- Evaluated complex technical information against established standards and prepared a legal report with findings and recommendations for the client's patent application.
- Collaborated with clients and cross-functional teams to communicate technical insights, clarify project requirements, and deliver analytical support in fast-paced, detail-oriented environments.

Jet Propulsion Laboratory (NASA), La Canada Flintridge, CA

April 2023 – Aug 2023

Software Development / Data Science Intern

- Developed a Python-based machine learning data exploration tool using libraries such as Keras, Plotly, Seaborn, and NumPy to analyze rasterized UAVSAR wildfire and vegetation datasets from the NASA Jet Propulsion Laboratory.
- Applied statistical analysis and foundational machine learning techniques to identify patterns and correlations in environmental data, collaborating with JPL ecology researchers to validate findings and improve analytical accuracy.
- Created technical documentation and user guides to support reproducibility, workflow transparency, and future integration of machine learning research and data analysis processes.

Projects

Cybersecurity Evaluation Tool (Senior Design Project)

- Developed and documented a cybersecurity compliance evaluation solution using the Department of Homeland Security's Cyber Security Evaluation Tool (CSET) by analyzing National Institute of Standards and Technology FIPS/NIST security frameworks, conducting organizational security posture interviews, and compiling compliance research into formal DHS-aligned documentation.

Password Manager Application (Android Studio)

- Designed and developed a secure password manager application in Android Studio using Java and SQLite with encrypted credential storage, authentication, and database management features.

Exploratory Data Analysis (Python)

- Performed exploratory data analysis in Python through Jupyter Notebook using machine learning models, heat maps, and data visualization techniques to analyze NBA championship datasets and identify key performance metrics.

Skills

Java • Python • JavaScript • SQL • C++ • React 18 • Node.js • PostgreSQL • MySQL • SQLite • Anaconda • Github • Google Colab • Firebase • REST APIs • CI/CD • Agile (Scrum) • Machine Learning tools: JupyterLab, Keras
